Joins in RDBMS

Agenda

1. Concept
2. Inner join
3. Outer join
4. Multiple joins
5. Summary

1. Concept

- Handling data from multiple files
- Types of join
  - Cross join
  - Inner join
  - Outer join
- Joins on multiple tables
- Summary

2. Cross Join

OBJECT™ TECHNOLOGIES

- Syntax

```
select *
from table1
join table2;
```

- Will generate cartesian product.

3. Inner Join

OBJECT™ TECHNOLOGIES

- Types
  1. Equi join
  2. Non equi join
  3. Self join

- Syntax- **Equi join**

```
select *
from table1
join table2
on table1.column = table2.column;
```

- Will fetch common data from both the tables.

- Syntax- **Non equi join**

```
select *
from table1
join table2
on table1.column between table1.column and table2.column;
```

- Will fetch common data

- Syntax- **Self join**

```
select *
from table1
join table2
on table1.column1 = table1.column2;
```

4. Outer Join

OBJECT™ TECHNOLOGIES

- Types
  1. Left outer join
  2. Right outer join
  3. Full join

- Syntax- **Left outer join**

```
select *
from table1
left join table2
on table1.column = table2.column;
```

- Will fetch common data + all the data from left table.

- Syntax- **Right outer join**

```
select *
from table1
right  join table2
on table1.column = table2.column;
```

- Will fetch common data + all the data from right table.

- Syntax- **Full outer join**

```
select *
from table1
left join table2
on table1.column = table2.column
union
select *
from table1
right  join table2
on table1.column = table2.column;
```

5. Multiple Joins

- Syntax- **Multiple join**

```
select *
from table1
join table2
on table1.column = table2.column
join table3
on table1.column = table3.column;
```

- e.g

```
select *
from emp e
join dept d
on e.deptno = d.deptno
join salgrade s
on e.sal between s.losal and s.hisal;
```

Summery

1. Concept
2. Inner join
3. Outer join
4. Multiple joins
