Capped Collections

What will be covered

- Capped collections
- Restricting documents in collection.
- Insert many

Capped Collection

OBJECT™ TECHNOLOGIES

- It is a collection which keeps a limit on the number of documents to be stored.

e.g

```
>db.createCollection("Blog",{capped:true,max:2,size:34564});
```

Rules for capped collections::

-Once a capped collection is created we cannot change it to normal collection

-We cannot delete from capped collection.

Capped Collections

- Consider following querry

```
>db.createCollection("Blog",{capped:true,max:2,size:34564,
                                autoIndexId:true});
```

-PK will automatically gte index.

-If capped is used during create collection, index will not be created.

-If additional document is added,then it will delete previous document.First one will be deleted.

-ilh we create capped collection then we will not be able to delete the data explicitely.

Insert Many

- We can use insert many to insert multiple documents.

```
>db.mycollection.insertmany([{no=1,name:'Abhishek'},{no=2,name:'Anagha'},{no=2,name:'Soha'}]);
```

findone()

- Displays only one document.

```
>db.movie.findone();
```

Removing _id from display

```
>db.emp.find({ename:'Krishna'},{empno:1,ename:1,_id:0});
```

Restricting documents in collections

- limit

  Restricts the documents from collection.

>db.movie.find.(actor:'Amitabh').limit(1);

-Will display only 1 movie, which is first in the collection.

>db.movie.find.(actor:'Amitabh').limit(2);

-Will display first 2 movies in the collection.

- skip()

  Skips the document.

>db.movie.find.(actor:'Amitabh').limit(1).skip(1).pretty();

-Will display only 2nd movie from the collection.

Examples

--Display first 5 documents

>db.movie.find.(actor:'Amitabh').limit(5).pretty();

----Display 5th, 6th and 7th documents

>db.movie.find.(actor:'Amitabh').limit(3).skip(4).pretty();

--Display all movies with numer of actors - 3

```
>db.movie.find.({actor:{size:3}});
```
