

Introduction to Style Sheets

1. Need of style sheets
2. Advantages of style sheets
3. Types of style sheets
4. Cascading effect

- Any HTML page will display well formatted content to the end user.
- For giving better look and feel to the content, style sheets are used
- Technically, no one runs the Internet. No one acts as administrator of the internet. Everyone can just be the part of the internet.
- There can be millions of hosts on the internet

- Origin of internet lies in ARPANet
- ARPANet : It is the project undertaken by Department of Defense as a way to protect government communications systems in the event of a military strike.
- In late 1980's it grew into massive network where many universities, research institutes, government networks became part of it

- There are mainly 3 types of style sheets that can be written
 1. External style sheet
 2. Internal style sheet
 3. Inline style sheet
- External style sheet
 - An external style sheet is a separate file containing style (Cascading Style Sheets) rules that define the styles.
Basic syntax of style rule:

```
h1 {  
    color: red;  
}
```
 - It can be linked with multiple HTML documents using <link> tag.

- Internal style sheet
 - Internal style sheet is a method of defining CSS rules directly within an HTML document using the <style> element.
 - Preferred when a unique styles needs to be applied to a single HTML document
 - Inside the <style> element, CSS rules are written in the same way as in external style sheets
- Inline style sheet
 - It is the way of applying CSS directly to individual elements using style attribute
 - Example:
`<p style="color:blue;background-color:gray" > .... </p>`

- One HTML page may be given styling by using different types of style sheets.
- Style sheet which is read by the browser at the end, will have its effect shown on the selected HTML element.
- We should use different properties for the selected elements in different types of style sheet so that we will get combined effect of all the properties for the selected element.
